ERG Environmental Services is pleased to offer training.

ERG is now in open-enrollment for a HAZWOPER 8 hour refresher training course. This course will provide our clients with affordable training that (1) meets/exceeds regulatory requirements, (2) focuses specifically on issues of interest in industrial operations, and (3) provides an enjoyable, informative experience. Our trainers are experts in their fields; have extensive experience working with industrial companies, and work hard to make their courses interesting.

We are offering the following class that is required of virtually all hazardous waste generators and many other companies as well.

This course meets the requirements outlined in OSHA 29 CFR 1910.120 for 8 (eight) hours of annual refresher training for workers at hazardous waste sites. This course is designed for general site workers who remove hazardous waste or who are exposed or potentially exposed to hazardous substances or health hazards. The course may include topics such as topics pertaining to workplace hazards associated with Hazardous Waste Operations and Emergency Response (HAZWOPER). Topics include HAZWOPER regulations, site characterization, toxicology, hazard recognition, personal protective equipment, decontamination, medical surveillance, confined space entry and emergency procedures. Upon successful completion of the course you will receive a certificate of completion.

Enrollment is open to those who have already completed the 40-hour or 24-hour HAZWOPER training.

<u>Attendees (Per Company)</u>	<u>One Day Rate</u>
1-2	\$150.00
3+	\$125.00

If several people/group at your facility need training, ERG recommends on-site training that can be tailored to address specific operations, plans, and procedures at your facility.

ERG is ready and able to help you establish, improve and/or maintain a safe workplace and a successful regulatory compliance program. If you are interested in other ERG EH&S services, including (but not limited to) on-site training courses, integrated contingency planning, permitting and environmental/safety/hazardous waste compliance audits, please contact us.
